

MAKE YOUR TEAMVIEWER RUN IN BACKGROUND

I have received several feedback that they have ended the TeamViewer accidentally. Here is the method to reduce this phenomenon.

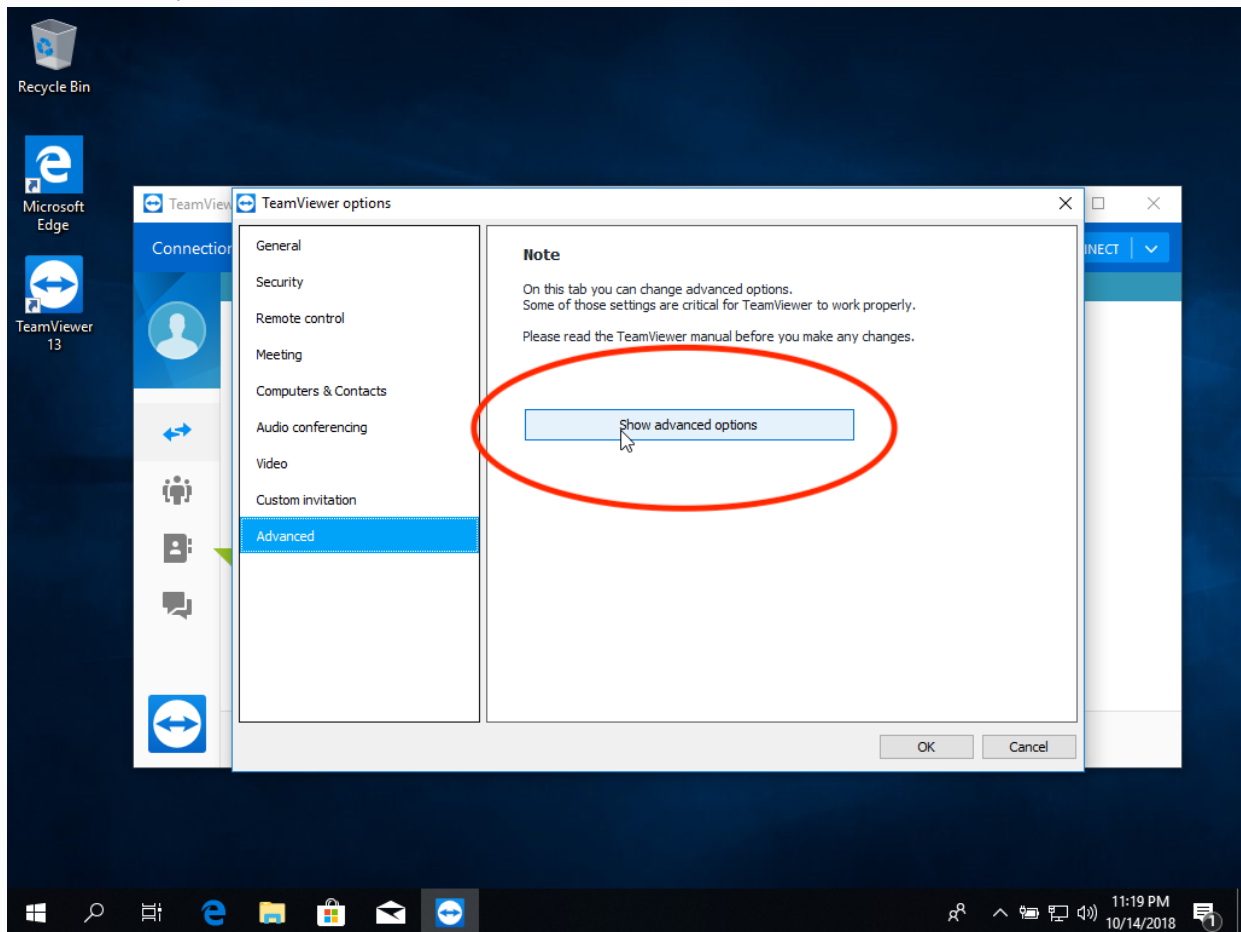

Step One Turn on the teamViewer GUI

turn on the GUI and you will find on the top left corner there is a button called Extras, inside, there is another button called options, double click the options:

Step Two Advanced Mode

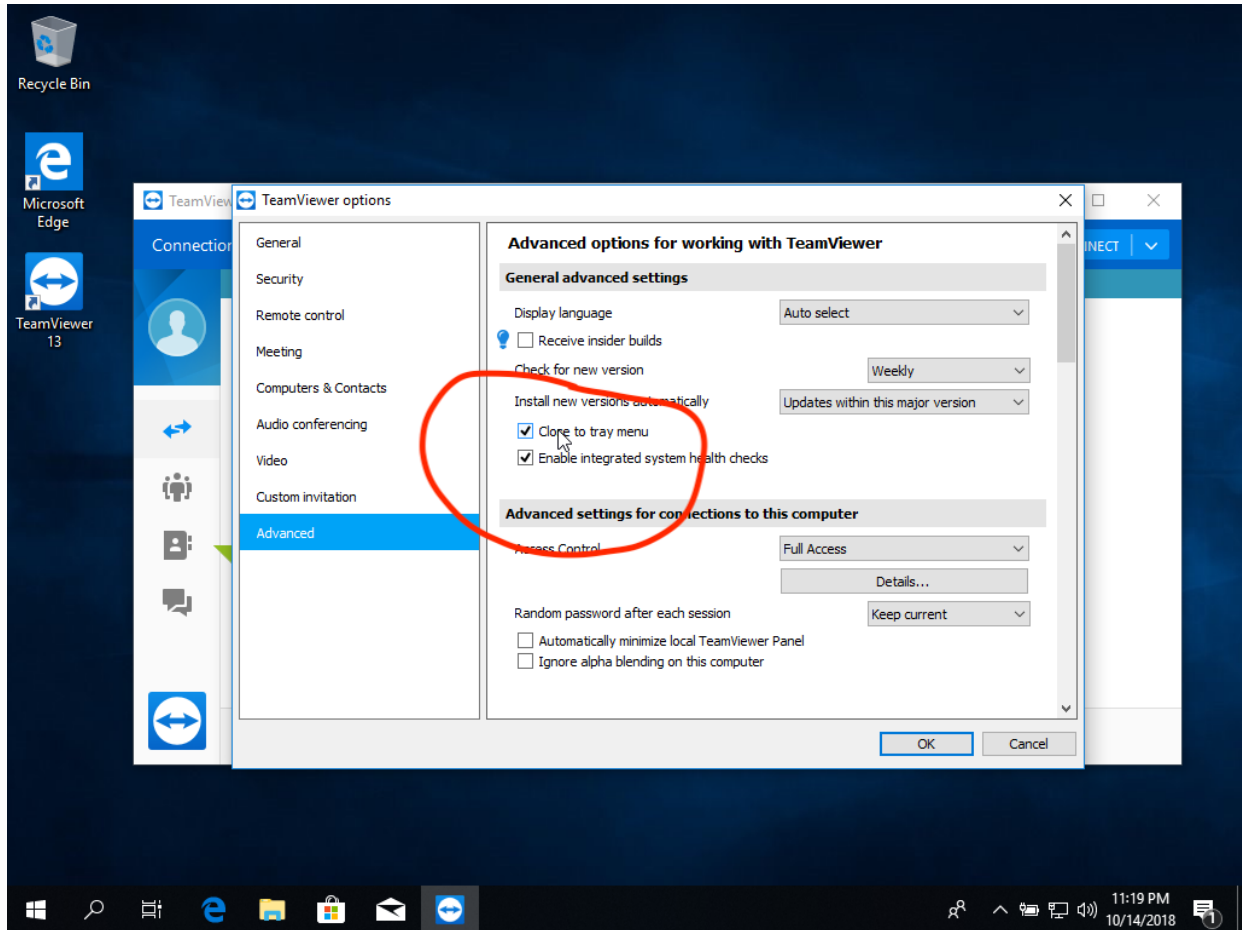

Inside the options, there is a advanced option in the left menu bar, find it and click on the advanced option:

Step Three Set up the

Click "show advanced options" to enter the setting interface of advanced options. In this interface, we can see the following Settings: "general advanced Settings", "advanced Settings for connected to this computer", etc.

You can run in the background after the software is turned off, as long as setting it in "general advanced Settings". **Click "Close to tray menu"** as shown in the picture and **click "ok" button** to successfully set the shutdown software not to exit.

-----If you have any difficulties in accessing and using your remote computing server, please contact the administrator:
